

ENVSOCTY 1HB3: POPULATION, CITIES & DEVELOPMENT

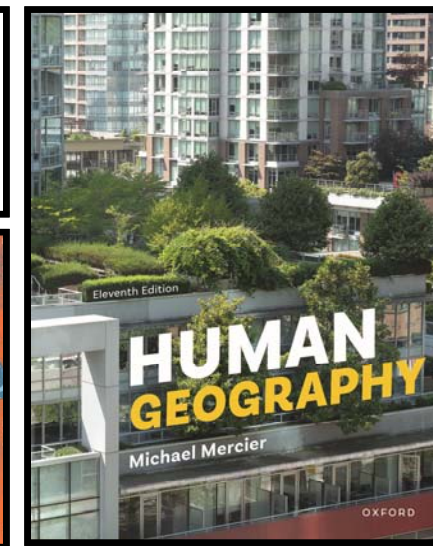

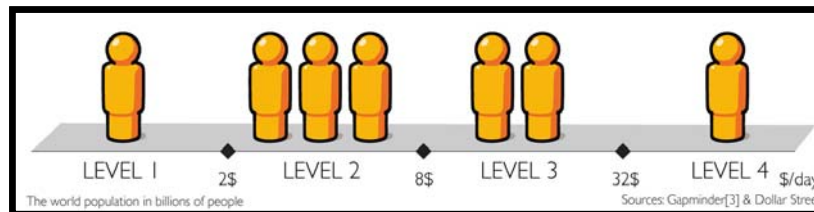

Introduction to Development: A Divided World

Dr. MICHAEL MERCIER

Outline:

- ▶ Introduction: Development Studies
- ▶ What is Development?
- ▶ Differentiating Levels of Development
- ▶ Understanding & Visualizing Development
- ▶ Theoretical Approaches: The Relationship Between the More & Less Developed Worlds
 - Modernization Theory
 - Dependency Theory
 - World Systems Theory
- ▶ Summary/Conclusion
- ▶ Readings: *Chapter 5*

Introduction: Development Studies

► Development studies

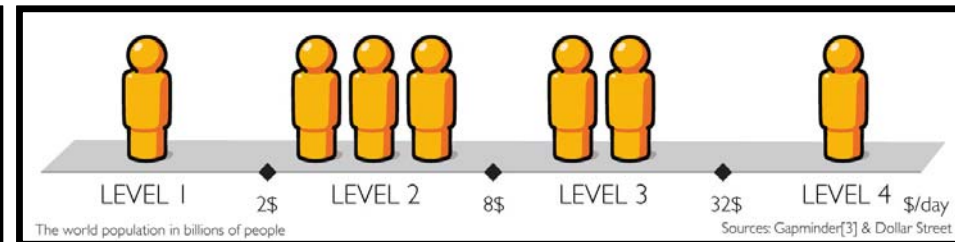

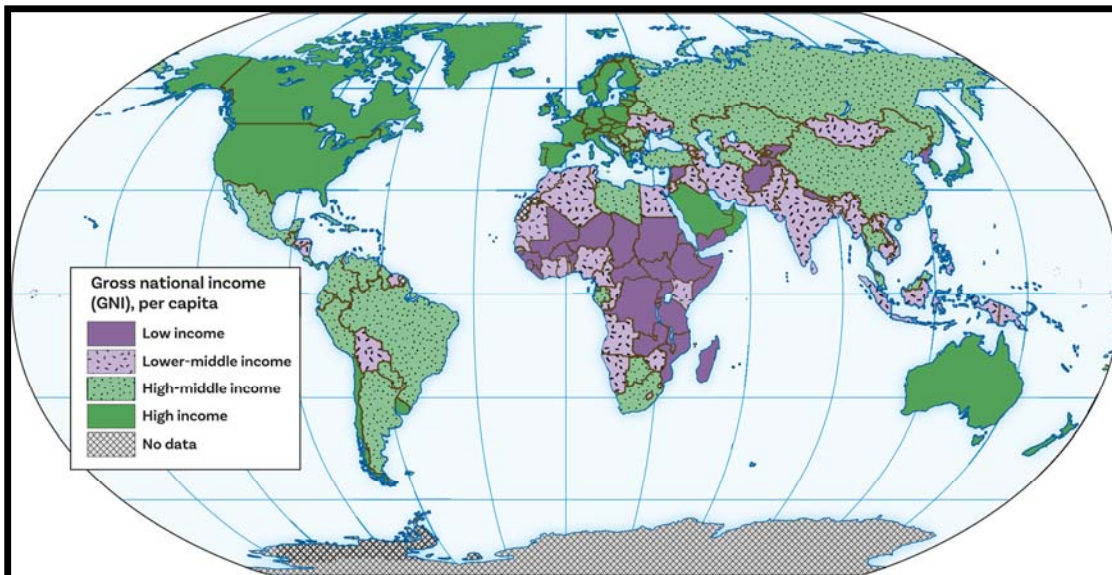

► Consider the following issues:

- How do we think about development? What does development mean?
- What makes a country/area “more developed” or “less developed”?
- How do we measure development?
- How do we understand/make sense of the observed patterns of uneven development?

What is Development?

- ▶ Spatial variations in terms of material well-being: *the “haves” and “have nots”*
- ▶ Spatial scales
- ▶ MOST people

What is Development?

- ▶ We refer to these variations in material well-being in terms of levels of development
- ▶ Development: *a process that brings about changes in economic prosperity and quality of life; an improvement in the material conditions of life; measured traditionally by economic criteria, but increasingly in more holistic ways including health, education, etc.*
- ▶ More Developed World: *a group of countries, including Canada, the United States, most of Europe, Australia, New Zealand, and Japan, that are characterized by a high standard of living and social well-being*
- ▶ Less Developed World: *a large group of countries characterized by low standards of living and social well-being*

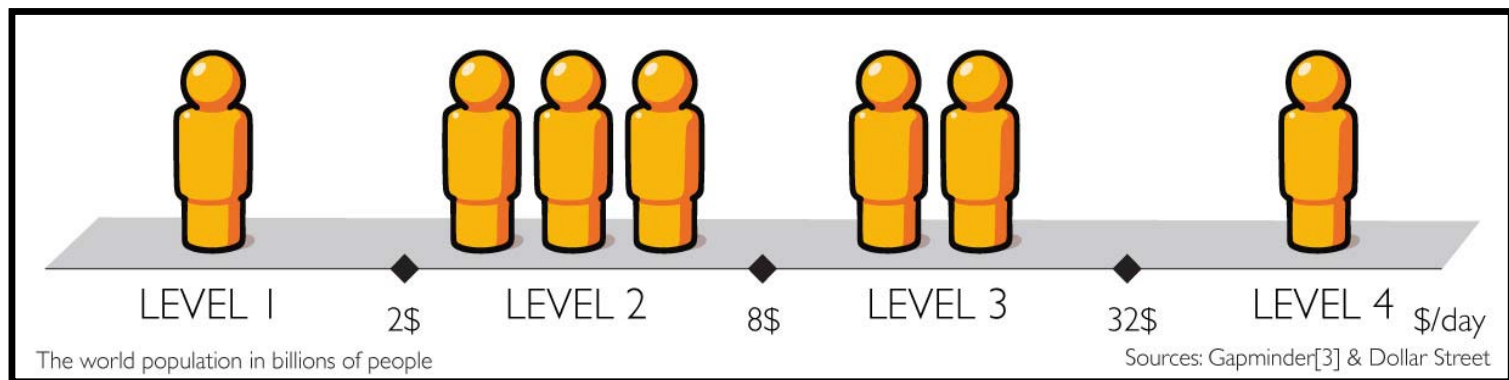

What is Development?

- ▶ Typically, we think of development in mostly economic terms
- ▶ We also need to think of development in broader (more holistic) terms

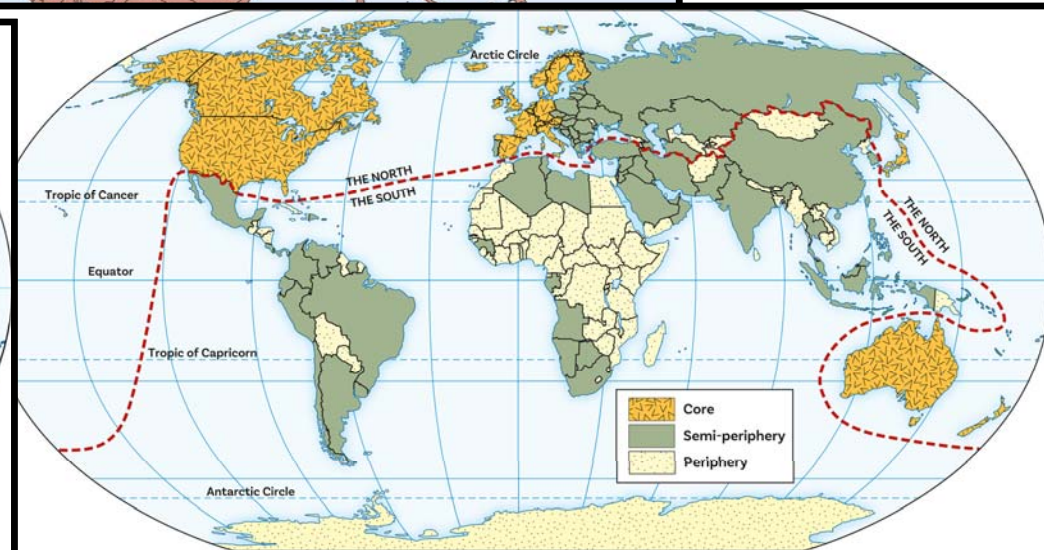

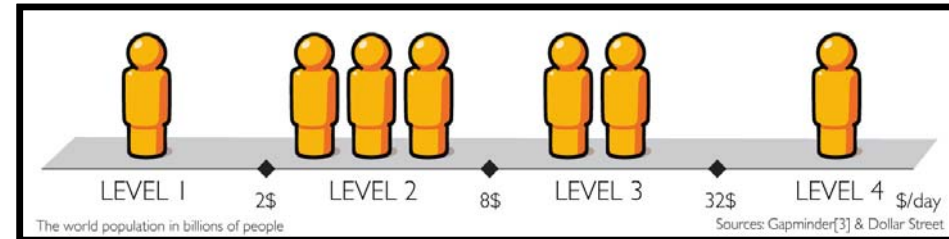

Differentiating Levels of Development

- ▶ We generally think about development as a continuum between two points
- ▶ Q. Is the world really divided in such a binary way (or are there important areas in between)?

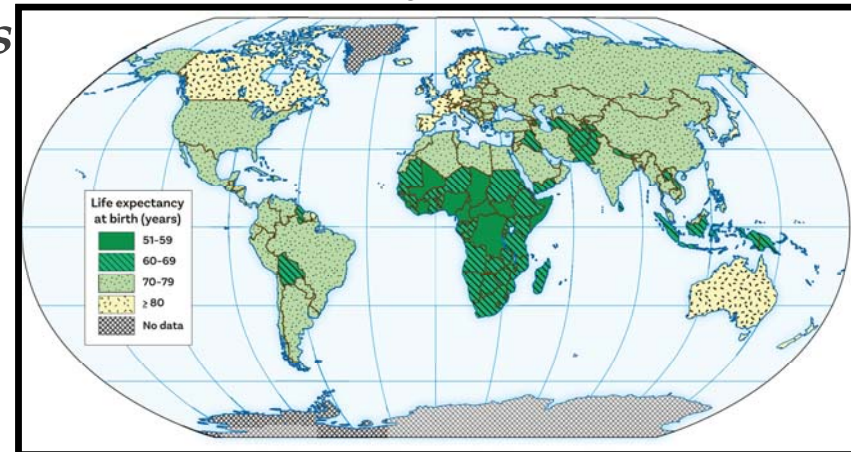

Differentiating Levels of Development

► Development differentiates between:

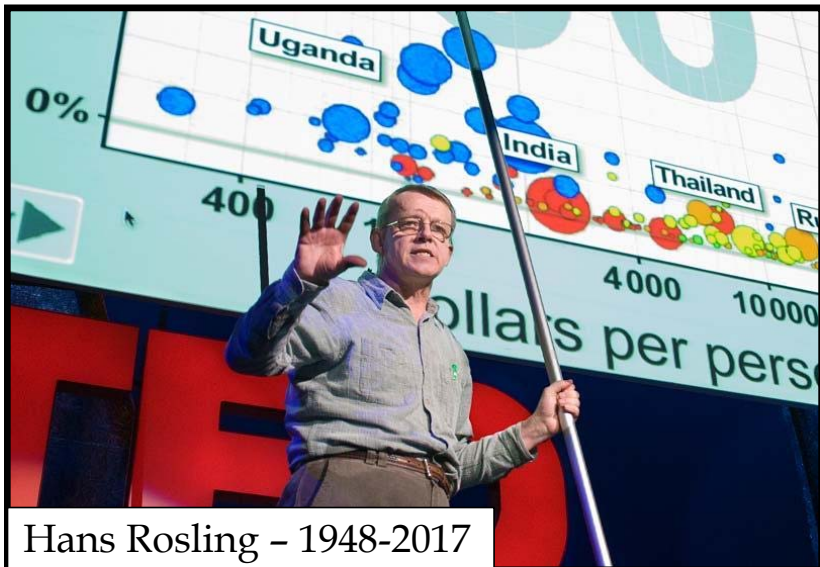

Differentiating Levels of Development

- ▶ Characteristics of the *least developed* parts of the world, in relation to the *most developed* parts include:
- ▶ Much of the less developed world are former **colonies**
 - Colonialism: *the forceful appropriation of foreign territory; usually established and maintained through military and political structures; creates unequal cultural and economic relations; usually involves the displacement of indigenous populations*

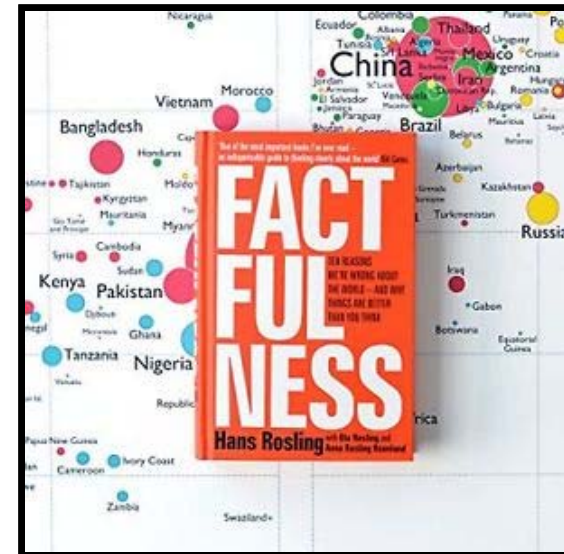

Understanding & Visualizing Development

- Understanding and visualizing uneven development (inequality)
 - Wealth & Health
 - Inequality?
 - Improvement?
 - More developed & less developed?

Hans Rosling, BBC (4:42)

Theoretical Approaches to Development

- ▶ How do we make sense of, or understand (theoretically), development?
- ▶ Following the de-colonization movements of the 1960s:

- ▶ Three prominent theories emerged:
 - Modernization Theory (Walter Rostow, economist)
 - Dependency Theory (many variants)
 - World Systems Theory (Immanuel Wallerstein, sociologist)

Theories of Development: Modernization Theory

- ▶ Rostow: **Modernization Theory** (see Box 5.2)
 - Questioned how newly independent countries in Africa and Asia would survive economically
 - Believed there was a “*path to development*”
- ▶ Describes the process of industrialization: *a process of economic and social change that transforms a society (country) from largely agricultural to industrial, involving an extensive reorganization of the economy toward manufacturing and of society toward being urban; typically associated with an industrial revolution; often regarded as a key step in increasing a country's level of development*

Theories of Development: Modernization Theory

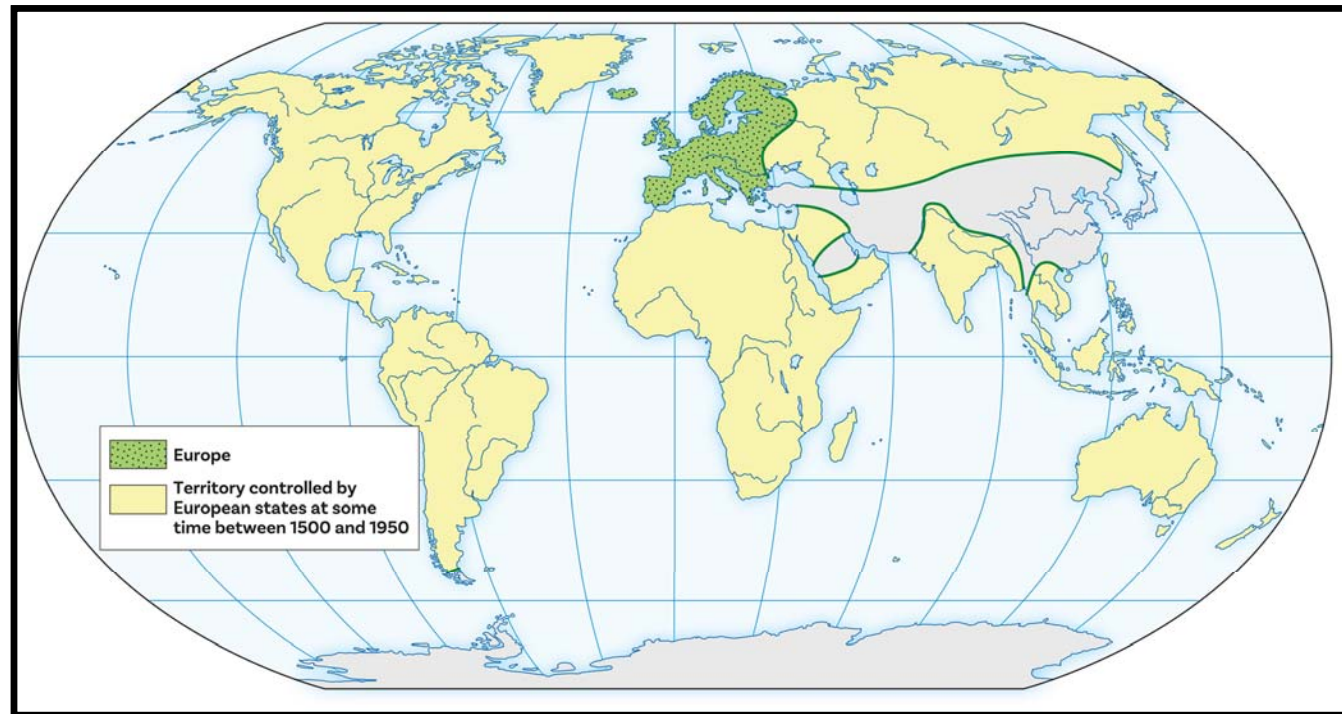

► Rostow: Modernization Theory

1. Traditional
2. Pre-Conditions for Take-Off
3. Take-Off
4. Drive to Maturity
5. High Mass Consumption

Theories of Development: Dependency Theory

- A second theory examines the historical and contemporary geographical relationship between the more and less developed worlds

Theories of Development: Dependency Theory

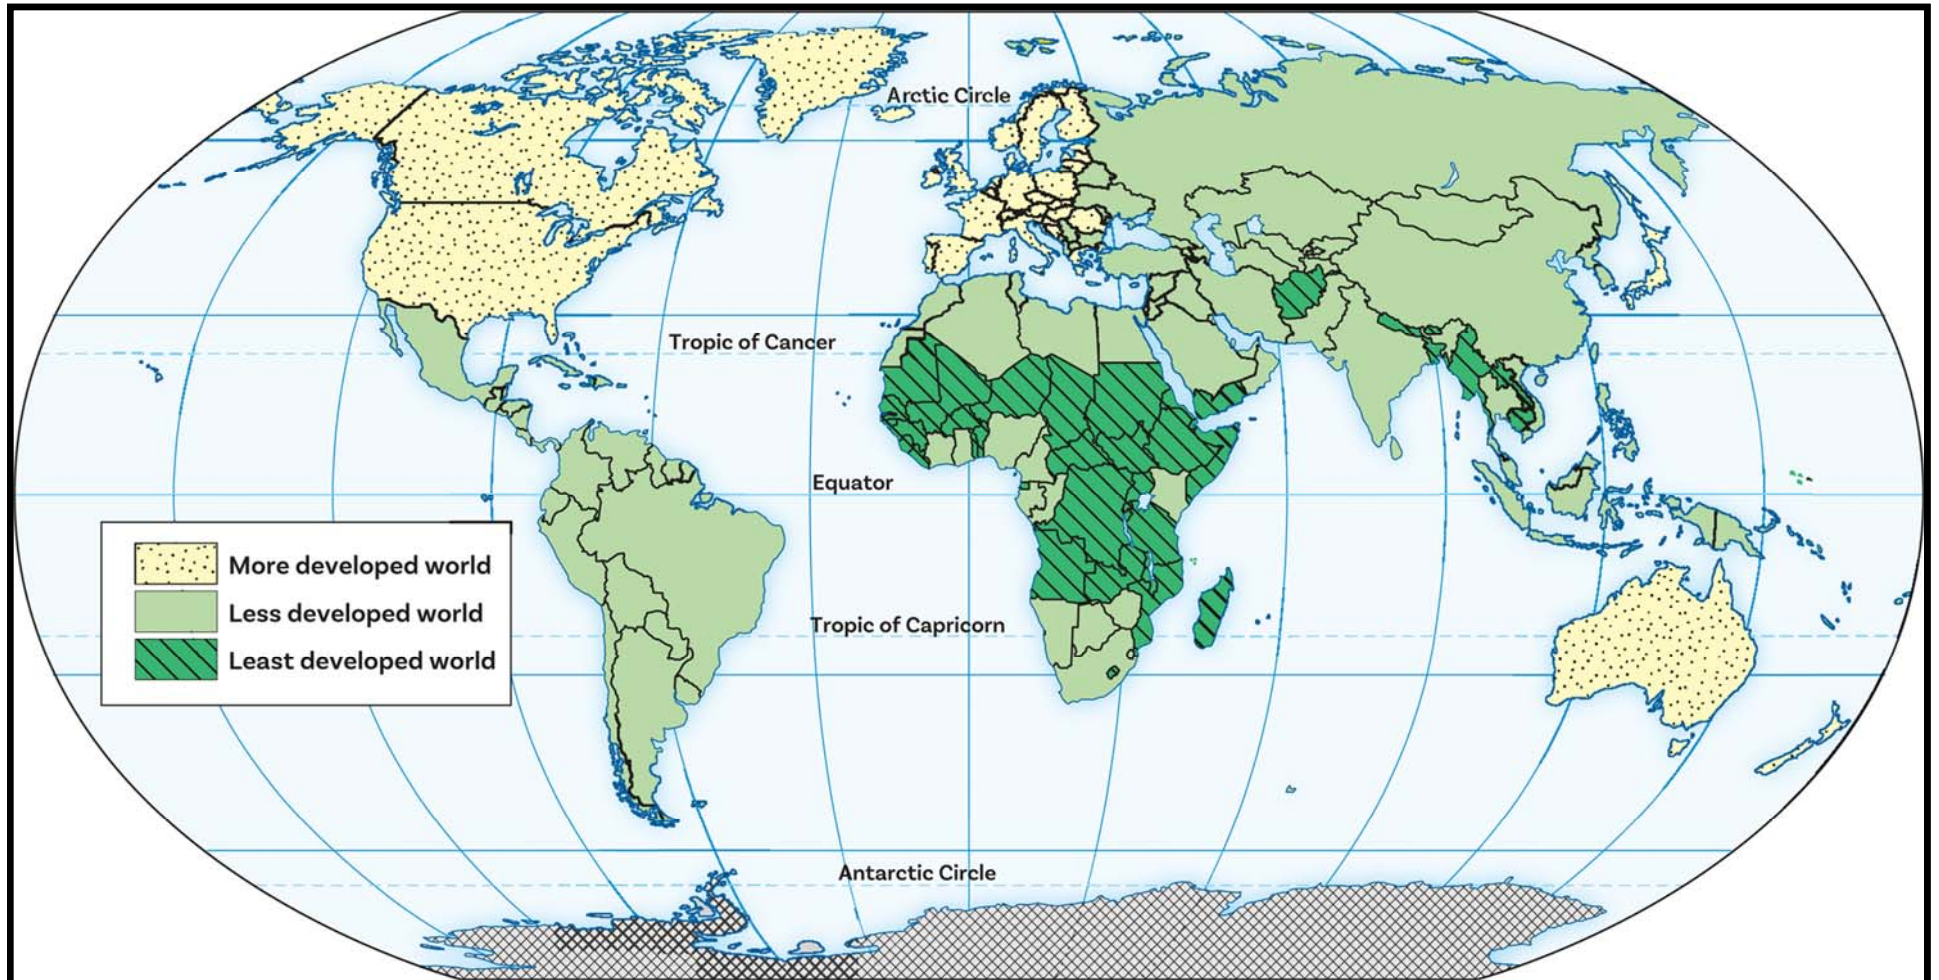

- ▶ Dependence: *in political contexts, a relationship in which one state (or people) is dependent on, and therefore dominated by, another state*
- ▶ Dependency Theory: *a theory that connects disparities in levels of development to the relationship between dependent and dominant states*
- ▶ Critics

Theories of Development: World Systems Theory

- ▶ World Systems Theory (Wallerstein): *a set of ideas centred around the notion that the world is an interdependent system of countries linked together by an economic and political competition that shapes relations between core (more developed), semi-peripheral (less developed) and peripheral (least developed) countries*
 - A theoretical way of understanding the historical and contemporary relationships between countries with respect to the global economic system, and sheds light on how this system benefits some and exploits others (e.g., the dependency relationship)

Theories of Development: World Systems Theory

Theories of Development: World Systems Theory

- ▶ Core countries **exploited** their colonies for labour and natural resources for their own benefit
- ▶ The effects of colonialism still linger in terms of this inequality
- ▶ Contemporary **globalization** (some call this **neo-colonialism**), perpetuates this relationship

Conclusion/Summary

- ▶ Spatial variations in terms of standard of living and quality of life
- ▶ Understanding via historical relationships, and current economic/political realities
- ▶ Questions to consider:
 - Q. Are we making judgment statements in our use of these terms?
 - Q. Are we inferring that development is good, and that more development is better?
- ▶ **Next Class:**
